Rockefeller University
1230 York Avenue
New York, N.Y. 10021-6399

Dear Dr. Lederberg,

Thank you for your prompt response, and for the reprint.

Enclosed are the Table of Contents, Preface, and Introduction.

Should you find the time to look them over, and want to see more, I'd be happy to send whatever other sections you request. I do extensively analyze a wide range of possible motivates for reproductive cloning, including unconscious ones. Relevant to the reprint you enclosed, I also specifically discuss those motives in light of human nature.

I couldn't agree more with the statement you make on p. 384 of your article: "To look at man only as the product of organic evolution, without an understanding of the complexities of his development and of the social factors that play upon his individuation, is bad biology certain to lead to bad policy."

Thank you.

Sincerely,

A handwritten signature in black ink that reads "Steve Levick". The signature is written in a cursive, slightly slanted style.
